MAKE YOUR PRACTICE ACES AWARE

Take the **FREE, two-hour Becoming ACEs Aware in California Training**

The future of LGBTQ+ healthcare is community care. From perinatal to specialists, all providers can use trauma-informed care to help heal the LGBTQ+ community.

When compared with their straight or cisgender adolescent counterparts, LGB, Transgender, and Questioning adolescents are statistically more likely to have:

- + Experienced poly-victimization
- + Experienced psychological and/or physical abuse
- + Higher the cumulative risk of negative health consequences

When a healthcare provider is ACEs Aware and trained in trauma-informed care, they are better able to treat the whole person. The more healthcare providers become ACEs Aware, the more lives improved and saved.

Medi-Cal offers a reimbursement per patient to providers who are ACEs Aware certified.

Learn more about the reimbursement and the healing benefits of trauma-informed care, here:
