

Did you know?...

LGBTQ+ people experience higher rates of substance use due to stress, discrimination, and barriers to accessing affirming care.

Structural Gaps in Care

More research is needed to understand how the opioid crisis affects LGBTQ+ people —especially transgender and gender-diverse people.

Limited Affirming Spaces

Bars and nightlife are among the few accessible affirming spaces that LGBTQ+ people access, increasing the risk of substance use.

Violence and Minority Stress

59% of 2022 U.S. Trans Survey respondents in California have faced violence and harassment.
